

Rapid Deployment

Adapting to your evolving needs, Xavo presents R3, a scalable SaaS solution available in three packages. Begin your journey with our Starter Pack, designed for managing inventory and conducting basic laboratory tasks, or unlock the complete potential of our algorithms and AI capabilities with the **Enterprise Pack**. Both options are cloud-based and can be quickly deployed within just a few days as a true 'Out-of-the-Box' solution. Alternatively, enjoy the benefits of the **Copilot's Pathfinder algorithms and AI capabilities** in a standalone package that can easily be integrated with any 3rd party sample management software.

About us

As part of the Ascapex software group with more than 100 employees in Germany, Switzerland, and the U.S, Xavo is a pioneering software company solely dedicated to revolutionizing the Biopharma R&D industry through cutting-edge Software-as-a-Service (SaaS) solutions that are instantly available. Led by a proficient team with years of experience in delivering enterprise software solutions to customers in the Life Science sector, we deliver the 'Copilot' that empowers organizations in overcoming the complex challenges affecting sample management labs today.

The Smart Copilot For Your Lab Operations

Boosting throughput with next-gen algorithms and AI

Your AI Copilot

Every sample management lab possesses its own distinct characteristics, yet they all grapple with a common challenge: efficiently delivering samples for multiple projects simultaneously. Over time, these labs have developed diverse strategies to prevent themselves from becoming bottlenecks in the R&D value chain. Our AI-driven scheduling solution is designed to enhance your lab's throughput using your existing resources.

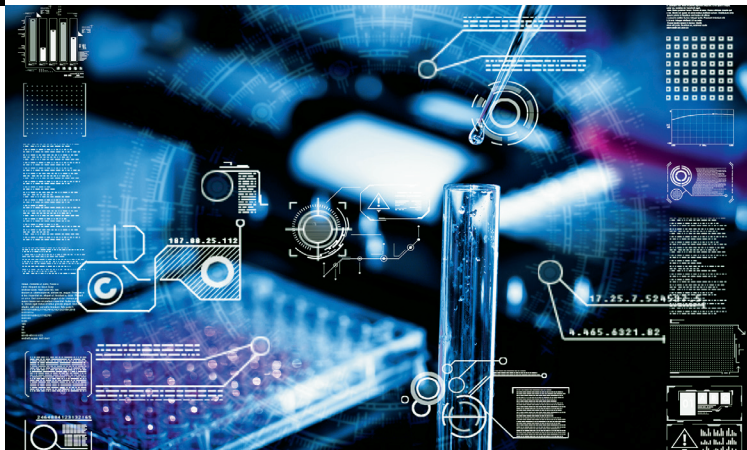

- **Learn from operator insights:** The AI acquires an understanding of your operators' decisions in their daily tasks and **adapts to these insights for future interactions.**
- **Optimize resource allocation:** The AI seamlessly adapts to the changing landscape of your lab, such as introducing new capabilities and equipment.
- **Increase lab throughput:** The AI generates a plan to help you complete more orders within the same timeframe.

Next-Gen Algorithms

Assay techniques are continually evolving, leading sample management labs to face an ongoing challenge to deliver samples in the right formats. The process of validating these formats and establishing workflows can be time-consuming, constraining the variety of samples that can be offered. Our **Pathfinder algorithm** gives you the freedom to supply samples in any format without wasting precious time developing workflows.

- **Unlock** all capabilities of your existing equipment
- **Automatically** generate instructions
- **Deliver** consistent and predictable results

The Pathfinder evaluates your available equipment, the stock samples in your inventory, and the required format for an order. It then systematically determines the optimal path through your lab following your business logic to **fulfill the order efficiently and effortlessly.**

Unlimited Integrations

Sample management software often serves as a bridge between various non-standardized systems that need to share data. Moreover, each lab possesses its distinct equipment with customized scripts and APIs.

Our **Interop Platform** enables seamless integration of a wide array of systems and equipment, whether accessed directly or indirectly.
